Frontend Developer

kstiana.netlify.app · github.com/Kstiana

PROFILE

Self-taught frontend developer with a strong eye for detail and a track record of shipping **complete, production-quality web applications** — from e-commerce and fintech dashboards to real estate platforms and AI-powered chat interfaces. Comfortable owning a build end-to-end: layout, interactivity, state management, and polish. Currently expanding into backend development to grow into a full-stack role.

PROJECTS

KsFoods — Restaurant Ordering Platform

ks-foods.vercel.app · github.com/Kstiana/Ks-foods

Built a client-side router from scratch — cart and auth state persist across navigation with zero page reloads. Full ordering flow: menu, cart, table reservations, reviews.

LuxEstate — Real Estate Portal

lux-estate-phi.vercel.app · github.com/Kstiana/Lux-estate

Structured as a true multi-page platform — filterable listings, agent profiles, saved favourites, and a blog — built to feel like a real product, not a landing page.

KSGlow — Skincare Brand Site

ks-glow.vercel.app · github.com/Kstiana/Ks-glow

Scroll-triggered storytelling and a live countdown timer turn a product page into a full brand experience, backed by social proof and conversion-focused copy.

KsWave — Banking Dashboard

kswave.vercel.app · github.com/Kstiana/Kswave

Real dashboard architecture — live spending charts, a multi-step transfer flow with searchable bank selection, and persistent state across every view.

ChopNow — Food Delivery App

ks-chopnow.vercel.app · github.com/Kstiana/Chopnow

Modelled after real delivery apps — live order-status tracking and an embedded customer support chat widget alongside restaurant browsing.

Kres Chat — AI Chat Assistant

kres-chat.vercel.app · github.com/Kstiana/Kres-ai

Persistent conversation history and adjustable response settings, wrapped in a clean, minimal chat UI with a warm, human tone.

EDUCATION

Self-Taught Frontend Development

Ongoing

Independent, hands-on study of HTML, CSS, JavaScript, and modern frontend practices — validated by building and shipping the projects above.
